

Wehr Nature Center Presents:

LAKE MICHIGAN TREASURES

Come make a splash with Wehr Nature Center this summer as we discover the treasures in Wisconsin's own freshwater ocean—Lake Michigan. Did you know Lake Michigan, part of the largest freshwater lake system in the world, can be seen from the moon? Did you know Lake Michigan is the 6th largest freshwater lake in the world? From fossils to pre-historic fish to shipwrecks to drinking water, we will explore the depths of this great lake. This interactive program will include story-telling, map building, water games, and more that will help us all learn why we should love our great lake.

This interactive program will be able to be done in person or pivoted to a virtual version depending on COVID-19 restrictions.
